

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 07/01/2014

Avalanche Problems

Wind Slab

Persistent Weak Layers

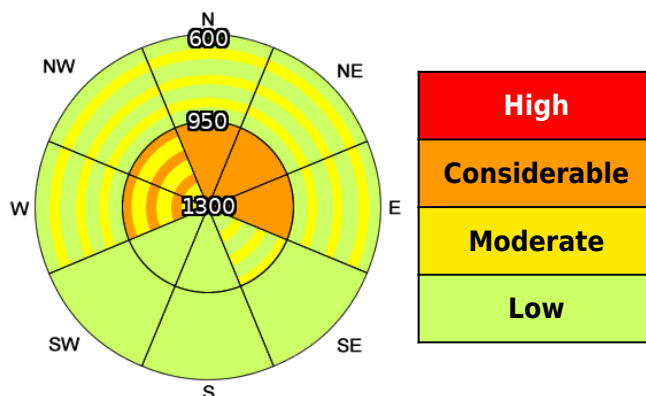

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

There will be drifting at higher altitudes with weakly bonded windslab continuing to build on mostly North to East aspects above 950 metres. Instabilities will remain on steep West to North-West aspects above this level, cross loading will affect other areas. Cornices will remain fragile and prone to collapse on all these aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers above 950 metres overnight will die out to leave a mostly dry day. Winds will be strong South-Westerly. The freezing level will fluctuate but remain just below the summits.

Comments

Another windy forecast with milder temperatures. Snowpack instabilities expected in steep terrain along with the potential for cornice collapse.
