

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 08/01/2014

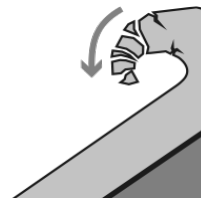

Avalanche Problems

Persistent Weak Layers

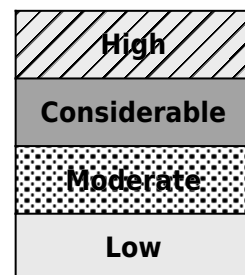

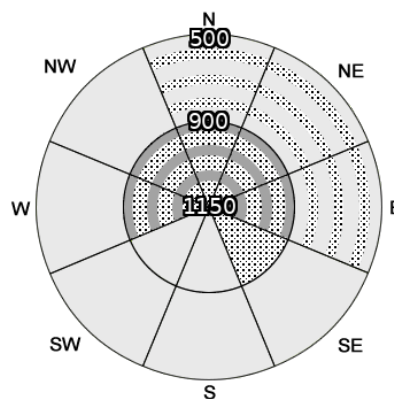

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Any new snow will be insignificant but instabilities will persist within the snowpack. These will be found on steep slopes mostly on West through North to Easterly aspects above 900 metres. Elsewhere the snowpack will be stable. Remaining cornices will be a hazard. The avalanche hazard will be Considerable.

Forecast Weather Influences

Winds will be strong from the West and South-West. The freezing level will drop overnight before rising to around 900 metres during the day. There will be a little new snow and rainfall throughout the period.

Comments

Some snow loss at lower levels.
