

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 09/01/2014

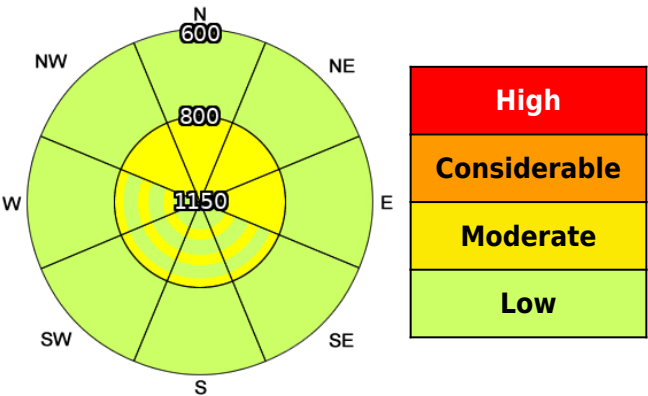

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The moist snowpack will stabilize in the colder conditions and will be generally well bonded on most aspects above 700 metres. During the afternoon new accumulations of windslab will develop in sheltered locations mainly on Northerly to East aspects above 800 metres. These new deposits will be moderately bonded particularly on steeper slopes, gully exits and coire headwalls. The avalanche hazard will be Moderate.

Forecast Weather Influences

Strong West-South-Westerly winds will veer to the West and decrease for a period before becoming moderate. The freezing level will be around 800 metres. It will be generally dry until the afternoon when snow showers will develop above mainly 700 metres.

Comments

Moist snowpack stabilising.
