

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 12/01/2014

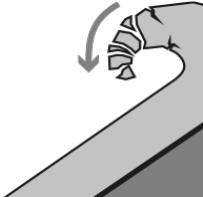

Avalanche Problems

Wind Slab

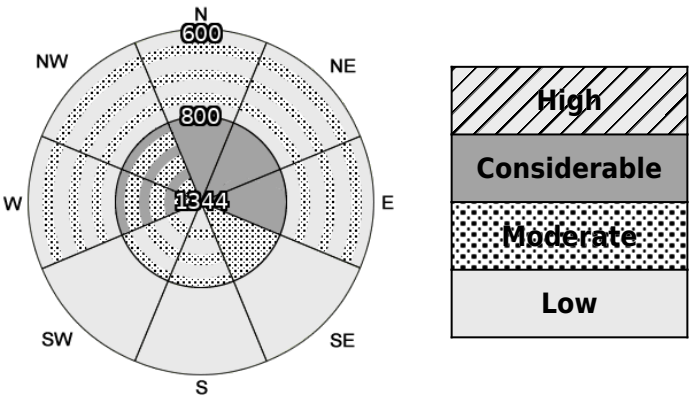

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of poorly bonded windslab will remain on North to East aspects above 800 metres. West and North-Westerly aspects will become increasingly affected through the day as the strengthening wind redistributes snow onto these aspects. Cornices will remain weak and prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers will quickly die out after which it will remain dry. Light South-Westerly winds will back to the South-East and strengthen. The freezing level will be around 800 metres.

Comments

Winds strengthening through the day on Sunday.
