

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Sunday 02/02/2014

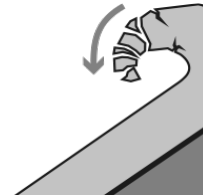

Avalanche Problems

Wind Slab

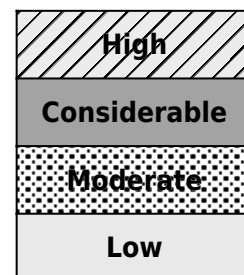

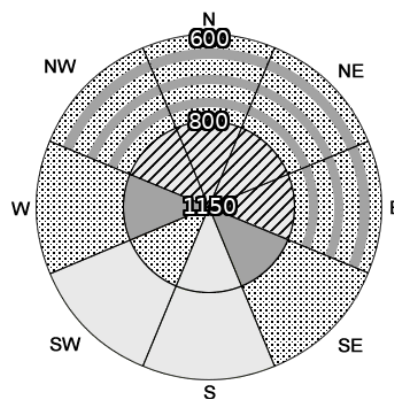

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Deep weakly bonded windslab will mostly be on North-West through North to Easterly aspects above 800 metres where avalanches will occur. Areas of unstable windslab will also be found in sheltered steeper terrain on many aspects above 600 metres. Aspects scoured by the wind will be stable and very icy. Cornices will be prone to collapse. The avalanche hazard will be High.

Forecast Weather Influences

There will be snowfall throughout the forecasted period with significant drifting. Winds will veer to the West before backing and strengthening to gale force from the South-West.

Comments

A slight change in wind direction. Expect plenty of drifting snow.
