

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Sunday 02/02/2014

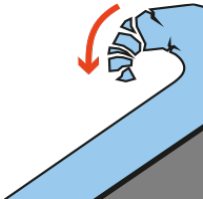

Avalanche Problems

Wind Slab

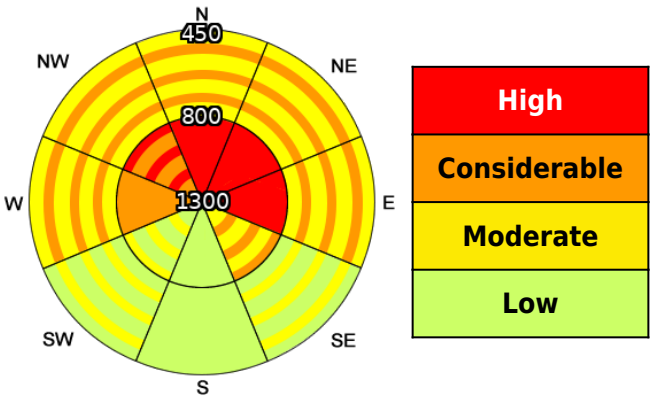

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Poorly bonded windslab will continue to develop above 800 metres on North-West through North to East aspects where avalanches will occur. Instabilities will exist on these aspects below this altitude on steep sheltered areas above 450 metres. Cross loading and instabilities within the older windslab will affect other aspects. Cornices will be weak and prone to collapse. The avalanche hazard will be High

Forecast Weather Influences

Snow continuing; lighter overnight but becoming more heavy during the day. Strong winds will veer from the South-South-East to South-Westerly. The freezing level will be around 700 metres.

Comments

Outlook generally unsettled with strong winds and blizzard conditions.
