

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Thursday 06/02/2014****Avalanche Problems****Wind Slab****Persistent Weak Layers****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

Poor to weakly bonded windslab will be found above 850 metres mostly in gully exits and sheltered scarp slopes on West through North to Easterly aspects and here avalanches are likely. Other sheltered areas will also hold windslab due to cross-loading. At lower altitudes wet instabilities may persist on steeper slopes. Cornices will continue to pose a hazard. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

There will be a couple of fluctuations in the freezing level between 900 metres and valley level where it will settle later in the day. There will be snowfall overnight and a little more in the afternoon. Winds will be very strong and vary in direction between South-West and West.

Comments

The snowpack is very variable. Windslab, scoured ice and deep drifts are encountered in short distances. Careful route planning is advisable.
