

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 09/02/2014

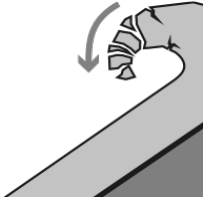

Avalanche Problems

Wind Slab

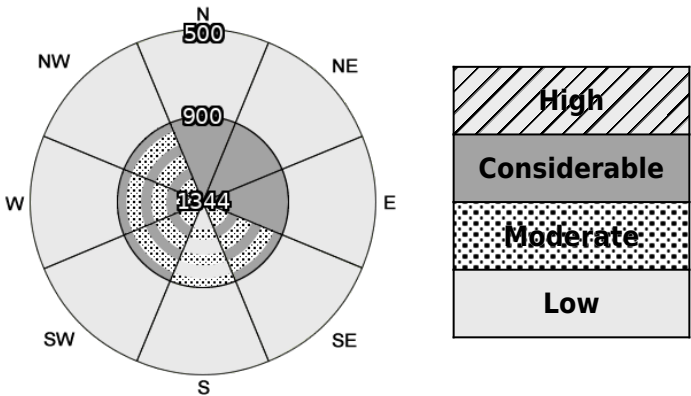

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Large areas of unstable windslab will continue to develop in areas sheltered from the West-South-West winds. Greatest accumulations will be on steep North, North-East and East aspects above 900m. Avalanches are likely in these locations. Other aspects will also be affected due to pre-existing windslab and cross loading. Wind scoured snow slopes will be frozen and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Winds will ease briefly overnight before veering to the West-South-West and increasing during the day. Snow showers above 700m through out the period.
