

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Friday 14/02/2014

Avalanche Problems

Wind Slab

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Further deposits of fresh unstable windslab will continue to build on the existing deep accumulations lying in sheltered areas, mainly on North through East to South-East aspects above 850 metres where avalanches will occur. Unstable windslab will also be present on other aspects. Cornices will be unstable and prone to collapse. The avalanche hazard will be High.

Forecast Weather Influences

Snow showers overnight night will ease during the morning and die out by late morning. Winds are expected to initially be very strong West-South-Westerly easing during the night and backing South-Westerly. During the day the winds are expected to be moderate and continue to back South-Easterly and Easterly, strengthening during the afternoon. The freezing level will lower to around 500 metres during the day.

Comments

Another wild day today with significant drifting of snow.
