

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 16/02/2014

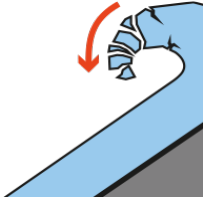

Avalanche Problems

Wind Slab

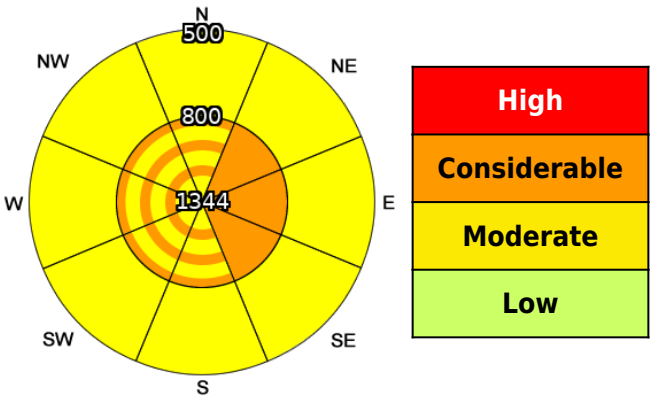

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

The situation will remain complex. Fresh unstable windslab is expected on North-East to South-East aspects above 800 metres where avalanches are likely. Other aspects, particularly in sheltered locations, will be affected by both large areas of moderately bonded windslab, and less extensive, but poorly bonded areas of more recently deposited windslab. The avalanche hazard will be Considerable.

Forecast Weather Influences

After overnight snow showers expected followed by a generally dry day. Moderate winds will be from the West. The freezing level will be around 600 metres, lowering to 400 through the day.

Comments

Unusually large quantities of snow above 600 metres in Lochaber at the moment.
