

### THE AVALANCHE HAZARD WILL BE CONSIDERABLE

#### Avalanche Hazard Forecast for Sunday 16/02/2014

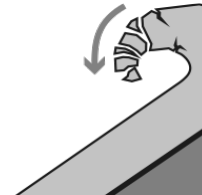

##### Avalanche Problems

Wind Slab

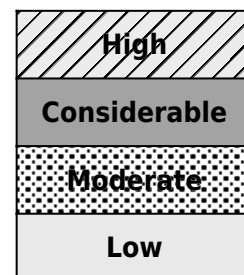

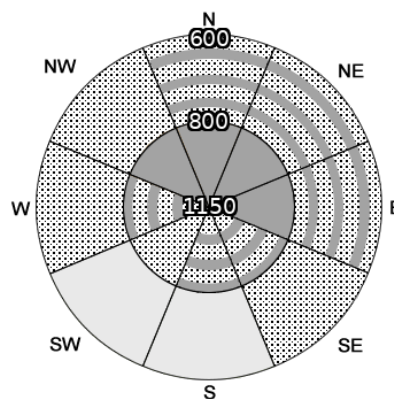

Persistent Weak Layers

Cornices

##### Forecast Snow Stability & Avalanche Hazard

There will be some improvement in stability but poorly bonded windslab will mostly be found in sheltered steep terrain features on North-West through North to Easterly aspects above 800 metres. Localised areas of windslab will also persist in sheltered terrain on other aspects and at lower altitudes. Elsewhere areas exposed to the winds will be generally stable. Cornices will continue to be a hazard. The avalanche hazard will be Considerable.

##### Forecast Weather Influences

There will be a little snowfall which will mostly be overnight. Winds will be strong from the North-West but will decrease in strength during the day, particularly when the winds back Westerly by late afternoon. The freezing level will be around valley level.

##### Comments

Another cold windy morning with winds easing.
