

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Monday 24/02/2014****Avalanche Problems****Wind Slab****Persistent Weak Layers****Cornices****Forecast Snow Stability & Avalanche Hazard**

Localised areas of windslab will be found mostly on North to Easterly aspects above 800 metres. Elsewhere older moderately bonded layers will persist at higher altitudes on steeper terrain on North-West through North to Easterly aspects. Cornice stability will still be suspect. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

There will be some new snow with the freezing level dropping overnight but rising again during the day to around 800 metres. Winds will be fresh to strong, backing South by the end of the day.

Comments

A very wet day. Significant snow loss but still okay above 700 metres.
