

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 26/02/2014

Avalanche Problems

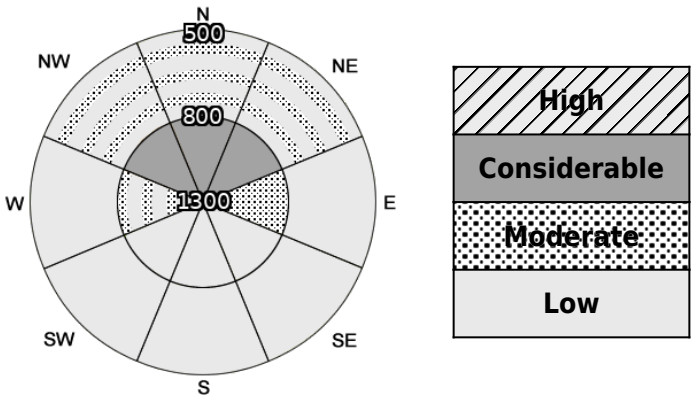

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to build on mainly North-West to North-Easterly aspects above 800 metres where avalanches are likely, with wind sheltered gully exits, corrie rims and scarp slopes most affected. Localised accumulations will be present on other aspects due to cross loading. Elsewhere the snowpack will be refrozen and stable. The avalanche hazard will be Considerable

Forecast Weather Influences

Very strong South-South-Westerly winds overnight then very strong Southerly during the day. Freezing level 600 metres rising to 800 metres or so later in the day. Precipitation falling as snow showers above 400 metres.

Comments

Continuing stormy but generally the snowpack is re frozen, long runouts if a trip should occur . Cornices remain large and suspect.
