

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 01/03/2014

Avalanche Problems

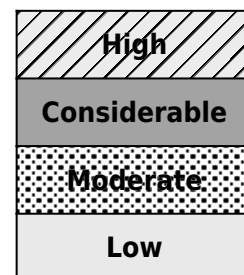

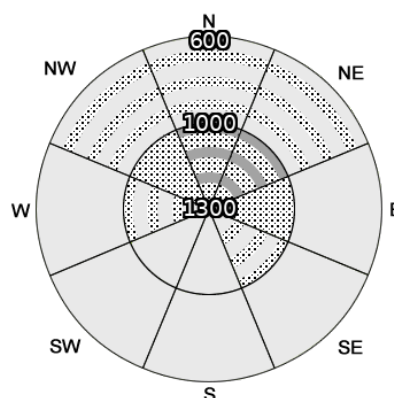

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised accumulations of moderate to poorly bonded windslab will continue to form in high wind sheltered locations on mainly North-to North-Easterly facing slopes above 1000 metres, with corrie rims and gully exits most affected. Localised deposits will be present on other aspects due to cross loading. Elsewhere stability will be good, especially where wind scoured. Cornices remain large and liable to collapse. The avalanche hazard will be Considerable

Forecast Weather Influences

No precipitation is expected throughout the forecast period. It will remain cold with a freezing level around 600 metres during the day. Winds will remain moderate to strong South-Westerly, backing Southerly in the afternoon

Comments

Wind doesn't let up, very wintry still with cold temperatures. Cornices remain very large and threatening.
