

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 10/03/2014

Avalanche Problems

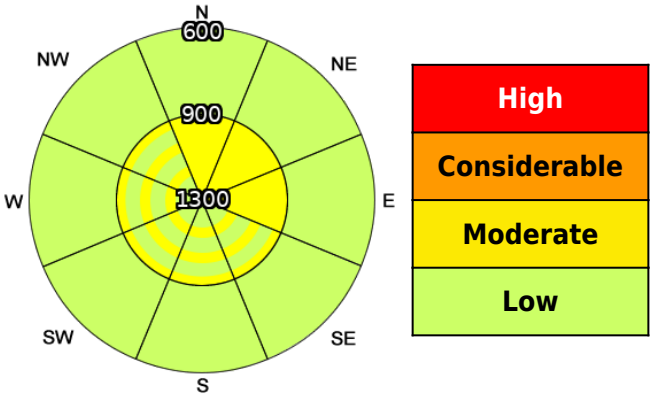

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The old snowpack will continue to consolidate in the cooler temperatures. New windslab accumulations will develop on Northerly to Easterly aspects above 900 metres. Corrie rims and gully tops will be most affected. Cornices will remain unstable. The avalanche hazard will be Moderate.

Forecast Weather Influences

After some snowfall during the first part of the night it will become dry for the rest of the forecast period. Moderate to strong West-South-Westerly winds will gradually decrease during the day. The freezing level will rise from 700 to 900 metres.

Comments

Big chunks of cornice gradually breaking off; however large cornices still overhang corries and could potentially collapse, a longer cold spell needed.
