

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 13/03/2014

Avalanche Problems

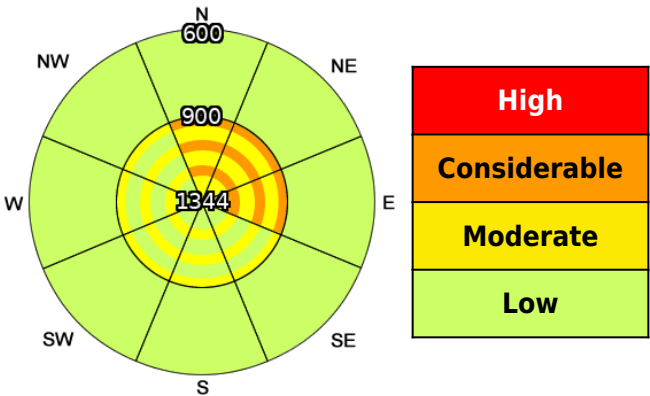

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The small areas of windslab which exist on North to East aspects above 900 metres will become progressively more unstable as they get wet. Wet snow instabilities will also exist in some steep slopes on other aspects. Large cornices will be prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will remain mild, with the freezing level well above the top. There will be drizzly rain later in the night and through the day. Moderate winds will be from the South-West.

Comments

Cornice collapse remains a significant hazard.
