

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 18/03/2014

Avalanche Problems

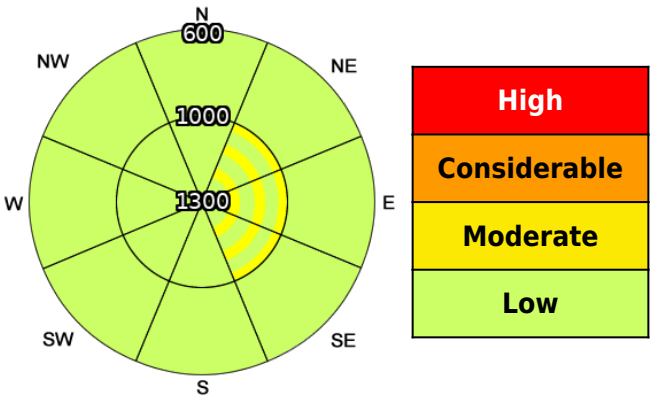

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Some further consolidation will take place with the existing moist snowpack, which will be generally firm and stable on all aspects and at all levels. Some new depositions of snow will form windslab in localised places on mainly North-East to South-Easterly aspects above 1000 metres, these should be limited in extent, avoidable, and confined to corrie rims and other wind sheltered places. Cornices will remain unstable and prone to collapse. The avalanche hazard will be Moderate

Forecast Weather Influences

Cooler overnight with a freezing level around 1000 metres. Precipitation will be generally light but will fall as snow at summit levels, rain below. Winds will be very strong Westerly throughout the forecast period.

Comments

Getting much colder mid week.
