

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 21/03/2014

Avalanche Problems

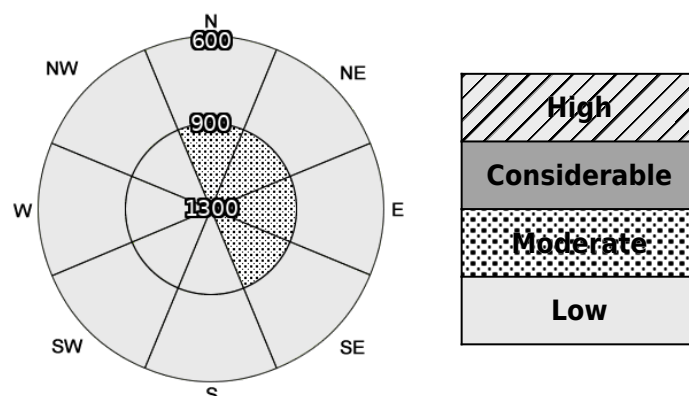

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to refreeze and will be mostly well bonded and stable at all levels and on all aspects. However new snow will build and form localised areas of moderate to poorly bonded windslab on mainly North-East to South-Easterly aspects above 900 metres, with some localised deposits on other aspects due to cross loading, wind sheltered corrie rims and gully exits will be most affected. Cornices remain unstable. The avalanche hazard will be Moderate

Forecast Weather Influences

Freezing levels will be at around 600 metres for the forecast period. Precipitation will be mainly snow showers above 400 metres with some dry spells. Winds will remain very strong South-Westerly throughout the day.

Comments

Cold and wintry for the next few days.
