

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 26/03/2014

Avalanche Problems

Persistent Weak Layers

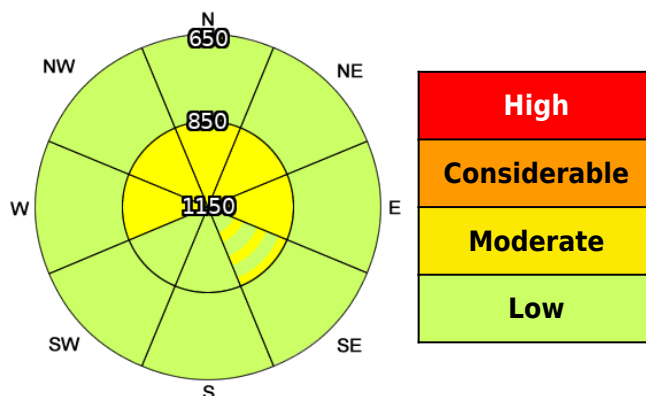

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

As the freezing level rises the snowpack will soften and areas of moderately to poorly bonded snow will be found on steep slopes on West through North to Easterly aspects above 850 metres. Elsewhere most of the snowpack will remain firm. Cornices will be prone to collapse potentially triggering snow slopes below. The avalanche hazard will be Moderate.

Forecast Weather Influences

There will be very little new snow with a mainly clear day forecast. The freezing level will lift to around the higher summits and the wind will back to the North-East and become moderate.

Comments

Freezing level will be around the higher summits tomorrow. Cornices prone to collapse.
