

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 19/04/2014

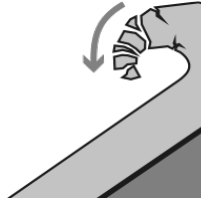

Avalanche Problems

Persistent Weak Layers

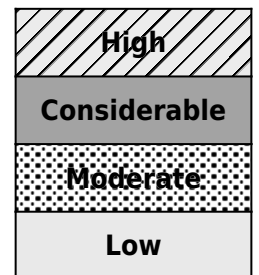

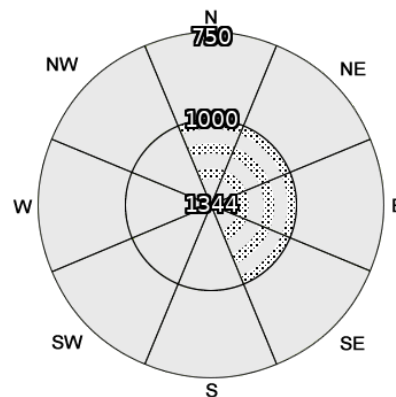

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised instabilities will remain, mainly on steep North through East to South-East aspects above 1000 metres. Surface instabilities are likely to develop on slopes affected by the effects of the sun. Otherwise the snowpack will be generally stable. Remaining cornices will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

It is expected to remain dry with light winds and the freezing level above the summits.

Comments

There are still substantial cornices above some slopes and they will collapse sometime! Many large, and some very large, deep cracks are present in the snowpack, some in unusual places, and others a long way back from the edge.
