

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 14/12/2014

Avalanche Problems

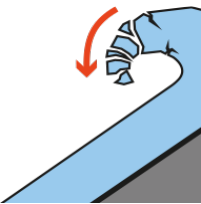

Wind Slab

Persistent Weak Layers

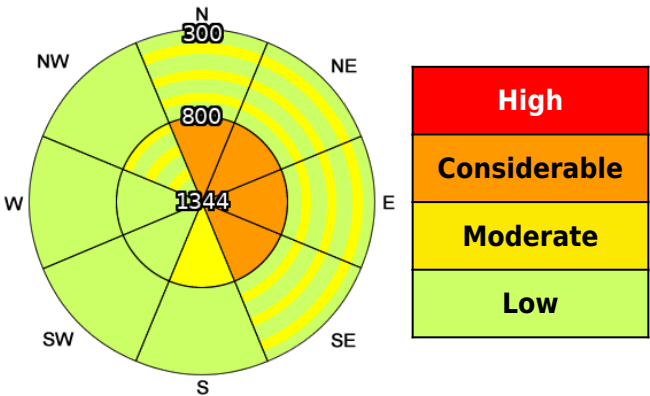

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to accumulate in sheltered gullies and slopes, mainly on North through East to South-East aspects above 800m. This windslab will become increasingly unstable as the temperature rises overnight and early Sunday. Avalanches are likely during this period. Stability should then start to improve during the day as temperatures fall. The avalanche hazard will be Considerable

Forecast Weather Influences

Moderate South-West winds increasing to Strong by dawn then easing slightly. Showers throughout the period falling initially as snow down to 300 metres, but gradually turning to rain below 1000m by dawn. Becoming colder again during the day with occasional snow showers later in the afternoon.
