

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 17/12/2014

Avalanche Problems

Persistent Weak Layers

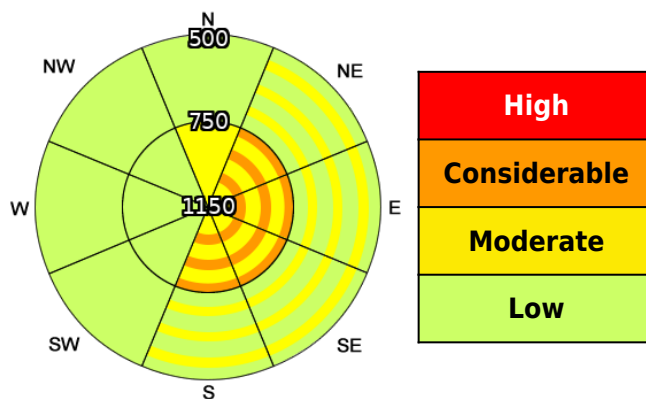

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

As the freezing level rises, stability of recent accumulations will become poor, particularly in deeper deposits on steeper slopes on North-East through East to Southerly aspects above 750 metres where avalanches are likely. Any remaining cornices will be prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

Early snow showers will die away before the freezing level rises to well above the summits. Winds will be strong mostly from the West.

Comments

Freezing levels due to rise overnight.
