

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 21/12/2014

Avalanche Problems

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

A change to wet and mild conditions will induce instability in all recent snow accumulations mainly on North-East to South-East aspects above 700m, where avalanches are likely. All cornices will become unstable and prone to sudden collapse. Much better stability on all recent windward slopes and exposed ridge lines. The avalanche hazard will be Considerable

Forecast Weather Influences

Much milder conditions in prospect with heavy rain at all levels from the early hours and continuing all day. Winds will be strong mainly South Westerly.

Comments

Significant period of thaw and heavy rain forecast. Very poor mountain conditions in prospect.
