

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 23/12/2014

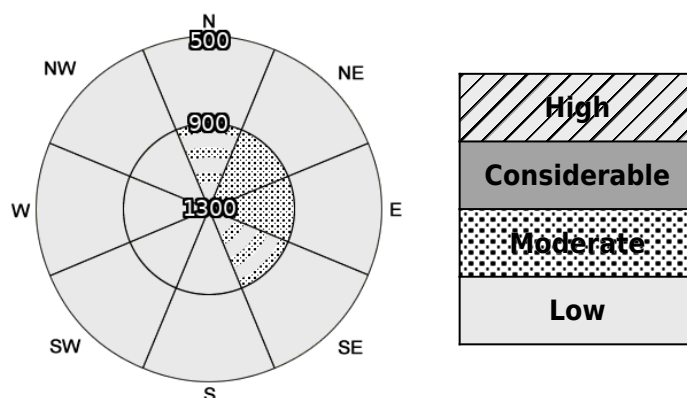

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The old snowpack will continue to consolidate and remain well bonded. Localised accumulations of windslab will develop mainly around corrie rims and gully tops on North-East and East aspects above 900 metres. Isolated instabilities will affect North and South-Easterly aspects due to cross loading. The avalanche hazard will be Moderate

Forecast Weather Influences

Light snowfall is expected mainly overnight on strong West-South-Westerly winds. The freezing level will be around 700 metres.

Comments

After yesterdays thaw, large expanses of firm snow still remain above 600m.
