

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 01/01/2015

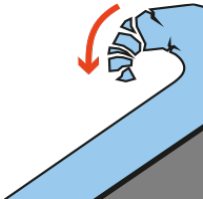

Avalanche Problems

Persistent Weak Layers

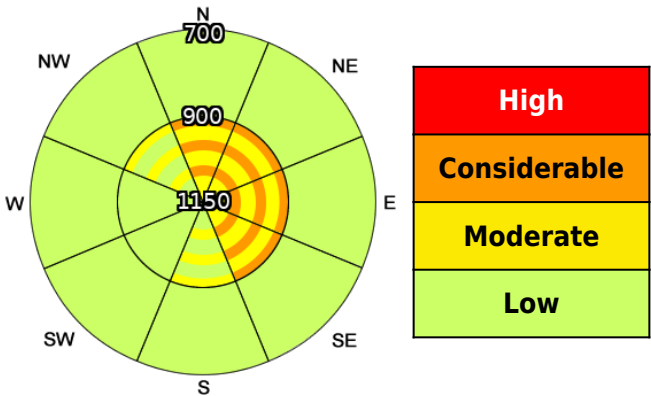

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will become more moist and soft but will remain generally well bonded. Areas of old windslab mainly on North through East to South-East aspects above 900 metres will become increasingly unstable as it becomes more saturated. The avalanche hazard will be Considerable.

Forecast Weather Influences

Strong South-Westerly wind. Rain at all levels, heavy and persistent by daybreak and throughout the day. Freezing level will be above the tops.

Comments

The thaw has chased the snowline up the hill. The snowpack is wet and due to get much wetter. Cornices may collapse and rockfall is possible. The strong winds are due to gust to severe gale force through the day.
