

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 10/01/2015

Avalanche Problems

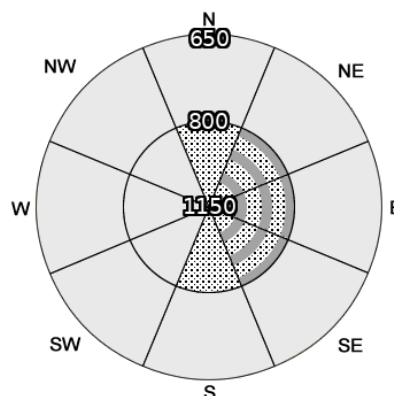

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

There will be a period of instability overnight with existing snow starting to refreeze and stabilise by dawn. Isolated areas of new unstable windslab will develop on North-East to South-East aspects above 800 metres. This will not be widespread and generally be restricted to very sheltered locations. North and South aspects will also be affected by cross loading. The avalanche hazard will be Considerable.

Forecast Weather Influences

Thaw conditions overnight followed by a return to cooler conditions with light snow down to around 500 metres. Storm force winds will be from the West.

Comments

Another very windy day forecast. Older snow expected to become very hard and icy.
