

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Friday 16/01/2015

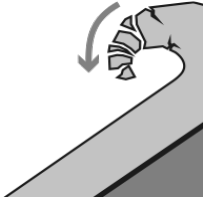

Avalanche Problems

Wind Slab

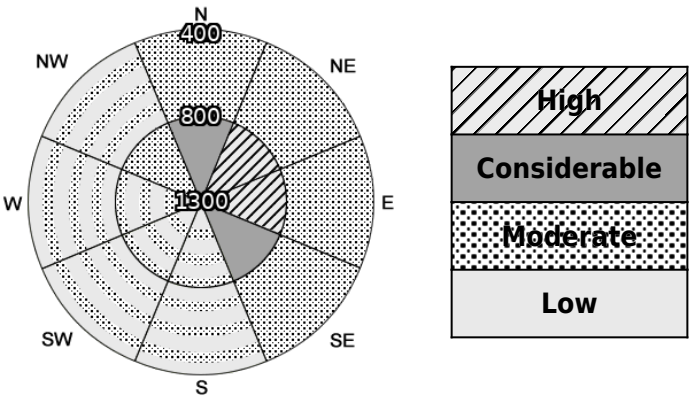

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Poorly bonded windslab will continue to build mostly on North-East to East aspects above 800 metres. On these aspects in areas of steep terrain avalanches will occur. Unstable windslab will lie in many other sheltered areas particularly North and South-East aspects. Cornices will be unstable and prone to collapse. The avalanche hazard will be High

Forecast Weather Influences

Very cold with snowfall at all levels on strong Westerly winds. The freezing level will lower to 200 metres.

Comments

Much cooler tomorrow with further snowfall,
