

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Saturday 17/01/2015****Avalanche Problems****Wind Slab****Persistent Weak Layers****Cornices****Forecast Snow Stability & Avalanche Hazard**

There will be some consolidation of the existing snowpack. Further accumulations of unstable windslab will form on North through East to South-East facing slopes and other sheltered areas, mainly above 750 metres where avalanches are likely. Cornices will be loaded and prone to collapse. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

Strong Westerly winds will back South-West and become light through the day. Steady snow showers overnight, some heavy, before becoming dry through the day. Remaining cold - the freezing level will be around 300 metres.

Comments

Unstable windslab on a wide arc of the compass due to recent shifting winds. Some deep drifts at lower levels. Wind due to ease.
