

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 25/01/2015

Avalanche Problems

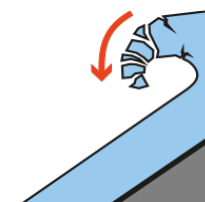

Wind Slab

Persistent Weak Layers

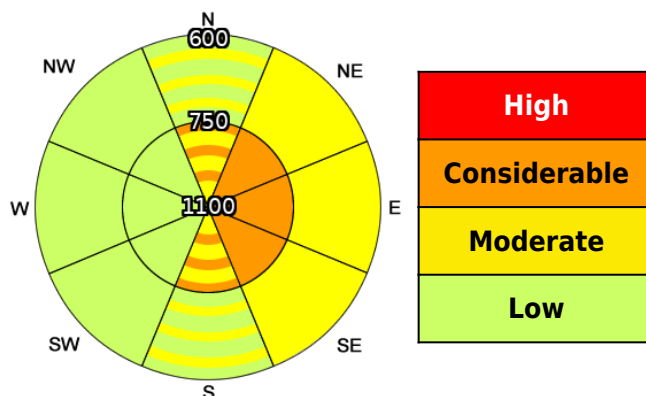

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Very poor stability on all steep North East to South East aspects above 750m where avalanches are likely as snow turns to rain. Stability a little better on selected North and South aspects. All cornices over most steep lee slopes will be weak and prone to collapse. Windward slopes and ridges will offer best safe travel options. The avalanche hazard will be Considerable

Forecast Weather Influences

Snow showers easing but continuing overnight. Much milder temperatures and rain at all levels on Sunday. Very strong South Westerly winds.

Comments

Very wintry on Saturday with drifting all day above 600m. Period of poorest stability expected to be when snow turns to rain during am. Max projected summit temps +2 degrees C. mid morning.
