

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 29/01/2015

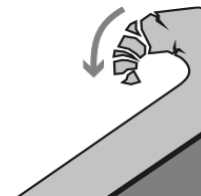

Avalanche Problems

Wind Slab

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will be found mainly in steep, sheltered locations such as gully exits and scarp slopes on North-East through East to South aspects above 800 metres with some North aspects also affected due to cross-loading. Exposed older snow will be firm and icy with ridges remaining scoured and stable. Unstable cornices will continue to develop. The avalanche hazard will be Considerable.

Forecast Weather Influences

Overnight light snow showers down to valley level, then a dry day. Strong winds will be mainly Westerly but veer North-Westerly for a short while.

Comments

Older snow becoming very hard and icy. Continuing wintry for the next few days.
