Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 28/01/2015 TO 18:00HRS Thu 29/01/2015

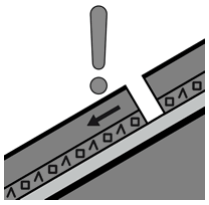

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 29/01/2015

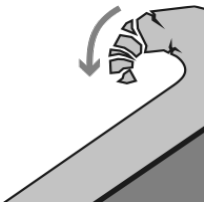

Avalanche Problems

Wind Slab

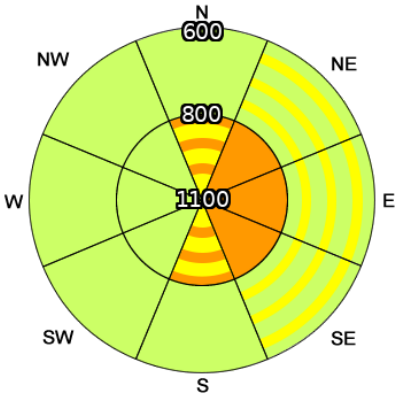

Persistent Weak Layers

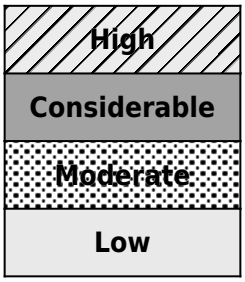

Cornices

Forecast Snow Stability & Avalanche Hazard

Further new, weakly bonded windslab development will take place on mainly North-East to South-East aspects above 800m where avalanches are likely. Cross-loading will also occur in steep gully flanks and exits on some sheltered North and South aspects. New weak cornices will grow over steepest lee slopes. The avalanche hazard will be Considerable

Forecast Weather Influences

Remaining wintry with further snow showers , some heavy at times with strong Westerly, then easing West North Westerly winds.

Comments

Mountain obs difficult today with wintry conditions and egress to high ground hampered by old, deep wet snow at lower elevations.
