

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 02/02/2015

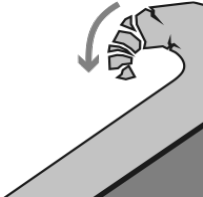

Avalanche Problems

Wind Slab

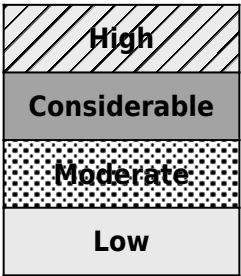

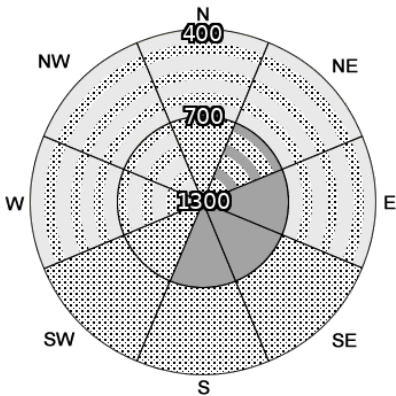

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

There will be further loading onto existing unstable windslab. Areas most affected will be on some North-East but mostly Easterly to Southerly aspects above 800 metres especially in steep convex terrain. Below this altitude instabilities will remain in steep sheltered terrain on these aspects above 400 metres. Localised weaknesses due to cross loading and existing windslab on other aspects. Cornices will be unstable. The avalanche hazard will be Considerable

Forecast Weather Influences

Occasional light snowfall overnight, dry during the day. North-West winds will back to the West and gradually ease. Freezing at all levels.

Comments

Weaknesses will remain within the snowpack due to cold temperatures.
