

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 18/02/2015

Avalanche Problems

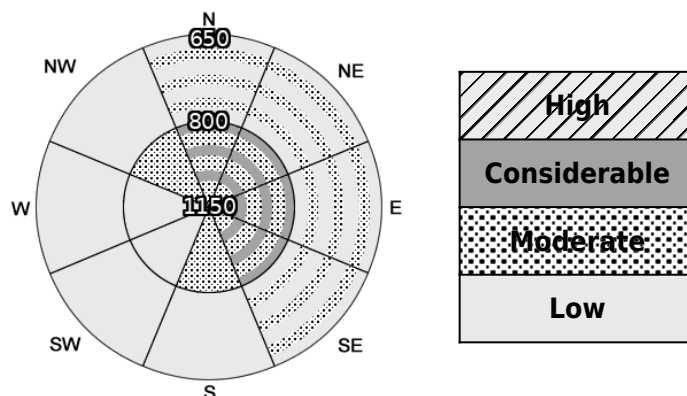

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

There will be some consolidation of the snowpack but areas of unstable windslab will be found on North to South-East aspects above 800 metres. Particularly affected will be gully exits, steep convex and scarp slopes. Older snow-ice on other aspects will soften but remain stable. Cornices will be prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

The freezing level will rise to above the summits with very light rain throughout the period. Winds will be strong from the South-West.

Comments

Forecast to become cooler later this week.
