

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 06/03/2015

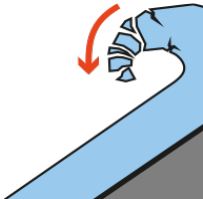

Avalanche Problems

Persistent Weak Layers

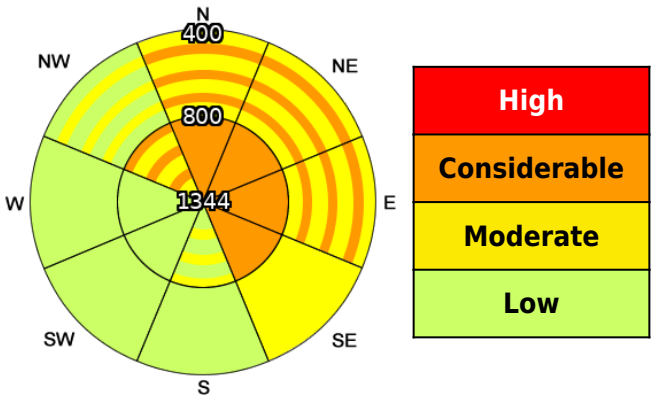

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Large areas of unstable wet snow will be present on many aspects. Greatest accumulations will be on steep North, North-East, East and South-East aspects above 800m. Avalanches are likely in these locations. Instabilities will also be present in other steep locations. Avalanches have the potential to run to lower elevations. Remaining cornices will be prone to collapse. The avalanche hazard will be Considerable

Forecast Weather Influences

Strong South-South-West winds with a band of rain during Friday with sleet over the highest summits.

Comments

During this period of wet snow instability there is the potential for large natural avalanches to run to lower elevations
