

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 19/03/2015

Avalanche Problems

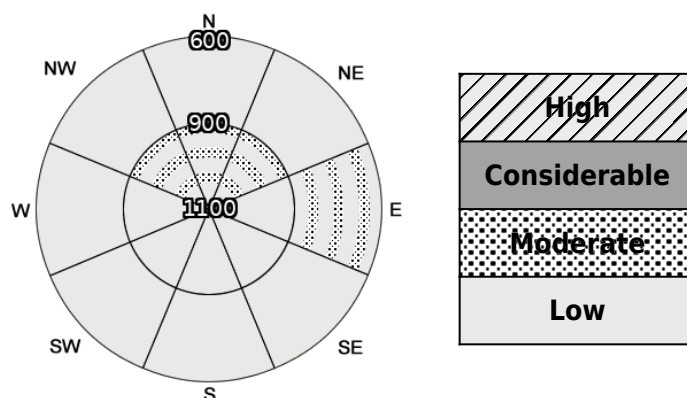

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Small accumulations of new slab are possible late in the period at highest elevations. These will add to existing localised deposits of thin moderately bonded windslab on some North West through North to Easterly aspects above 900m. Elsewhere in the main the snowpack is re-frozen, hard and stable. Residual full depth avalanche potential persists on a few East aspects below 800m. The avalanche hazard will be Moderate

Forecast Weather Influences

Staying dry overnight with freezing levels fluctuating below summits. Winds will be light South-Westerly to start, strengthening during the day with the arrival of a few light snow showers late afternoon.
