

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 20/03/2015 TO 18:00HRS Sat 21/03/2015

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

No precipitation is forecast. Colder for a time overnight then freezing level rising slowly from daybreak. Moderate variable winds.

Forecast Snow Stability and Avalanche Hazard

Good stability in most locations. Thin localised pockets of older windslab will be present on some North-West to North-East aspects above 900m. The avalanche hazard will be Low

Observed Avalanche Hazard - Fri 20/03/2015

Observed Weather Influences

Dry and cool overnight, overcast during the day with some drizzle. No snow at time of reporting. Moderate to strong North-West winds.

Observed Snow Stability and Avalanche Hazard

Stability is generally good. Pockets of thin older windslab will be present on some North aspects above 900m. Slow thaw at all levels. The avalanche hazard is Low

Mountain Conditions

Observed Mountain Travel Conditions	Diminishing snowpack, good above 800 metres A day of flat light and no definition. Winds 20 -30 mph progress difficult at times with stronger gusts
Comments	Ridge of high pressure building for Saturday.
