

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 25/03/2015

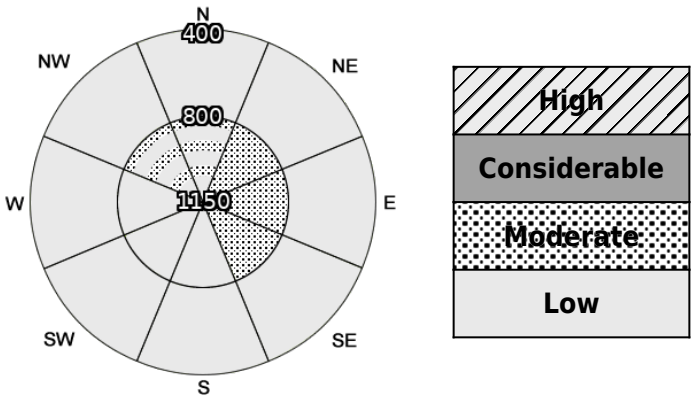

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Little change is expected in snowpack conditions. Areas of soft unstable windslab will remain on mainly North-East to South-East aspects above 800 metres. Accumulations will form on other aspects due to wind re-distribution through the day, these deposits will generally be quite shallow with greatest depths being found around coire rims and the tops of gullies. The avalanche hazard will be Moderate.

Forecast Weather Influences

After a few light snow showers during the night a dry day is expected. Light and variable winds will strengthen becoming South-Easterly through the day. The freezing level will be around 600 metres overnight, rising to 800 metres through the day.

Comments

Another fine spring day expected on Wednesday.
