

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 29/03/2015

Avalanche Problems

Wind Slab

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

The old snowpack will become more consolidated in the cooler temperatures; however instabilities will remain within the snowpack in areas of steep convex terrain on North-West through North to Easterly aspects above 1000 metres. New accumulations of windslab will develop on North-East to South-East aspects mostly around coire rims and gully tops above 900 metres. Below 900 metres stability will be generally good. Cornices will be unstable. The avalanche hazard will be Considerable

Forecast Weather Influences

Snow showers are expected above 600 metres throughout the forecast period. Moderate West-South-Westerly winds will increase in strength towards the end of the day. The freezing level will fall to 700 metres.

Comments

Looking wintry for the next few days
