

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 01/04/2015

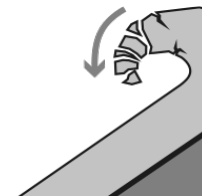

Avalanche Problems

Wind Slab

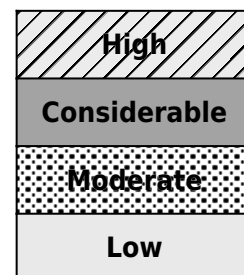

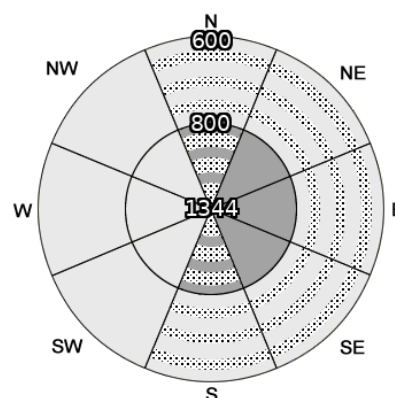

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Areas of unstable windslab will continue to be deposited on North-East to South-East aspects above 800 metres where avalanches are likely. Some sheltered locations on other aspects will be affected by cross-loading. Cornices will be prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers will continue through out the period. Strong winds will be from between the West and the North-West. The freezing level will be around 400 metres overnight, rising to 600 metres through the day.

Comments

Cold, windy and snowy. Felt more like January than the very end of March on the hill today.
