

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 05/04/2015

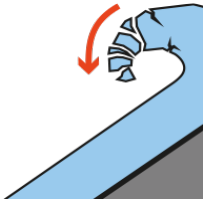

Avalanche Problems

Persistent Weak Layers

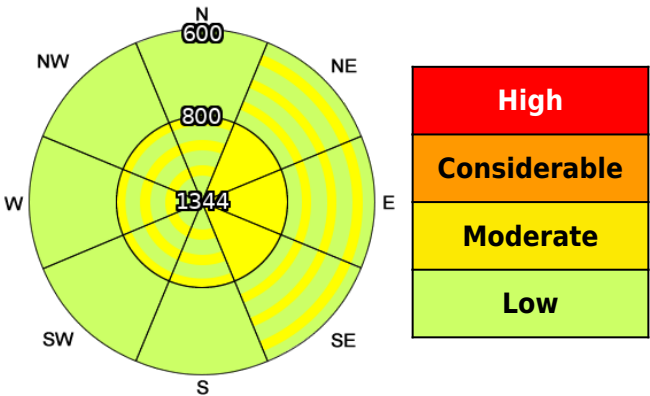

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to slowly thaw and consolidate at all levels. Wet snow surface instabilities will be present on many steep slopes above 900m. Localised areas of moderately bonded snow will also be present on mainly North-East, East and South-East aspects. Cornices will become increasingly unstable and prone to collapse. The avalanche hazard will be Moderate

Forecast Weather Influences

Dry with light winds and the freezing level above the summits.

Comments

As the thaw continues, there is an increasing hazard from falling ice and rocks. Cornice collapse will also threaten slopes below
