

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 07/04/2015

Avalanche Problems

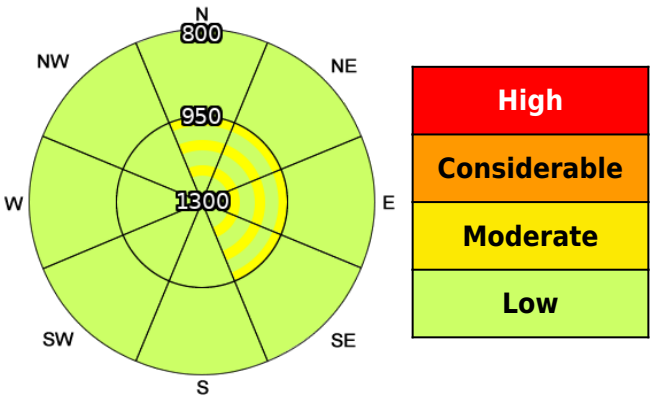

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to thaw at all altitudes. Greatest accumulations will remain on North-East to South-East aspects above 950 metres. Although the snowpack will be mostly stable localised instabilities will persist within deepest accumulations in areas of steep and convex terrain. Large cornices which overhang many Easterly aspects will be unstable. The avalanche hazard will be Moderate

Forecast Weather Influences

Dry conditions will continue with moderate Westerly winds. The freezing level will remain well above the summits.

Comments

Cornice collapse and rock fall a potential hazard.
