

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 12/04/2015

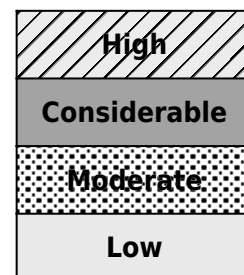

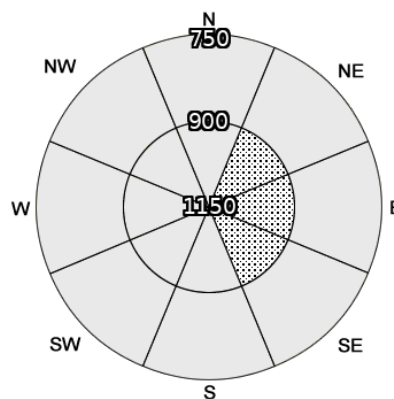

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

New deep moderately bonded windslab will form over older accumulations on North-East to South-East aspects above 900 metres. Particularly affected will be sheltered steep terrain such as gully exits and scarp slopes. Elsewhere there may be a light covering of snow but mostly it will be patchy with exposed locations snow free. The avalanche hazard will be Moderate.

Forecast Weather Influences

There will be further snow showers down to around 600 metres. Heaviest throughout the night but easing during the day. It will be a windy day, initially from the South-West but veering to the West-North-West by the end of the day.

Comments

Not quite a winters day today but staying windy with more snow forecast over this next period.
