

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 14/04/2015

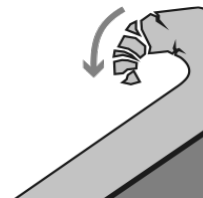

Avalanche Problems

Persistent Weak Layers

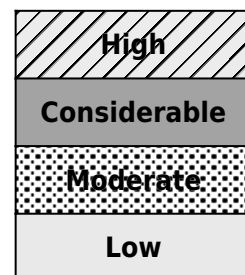

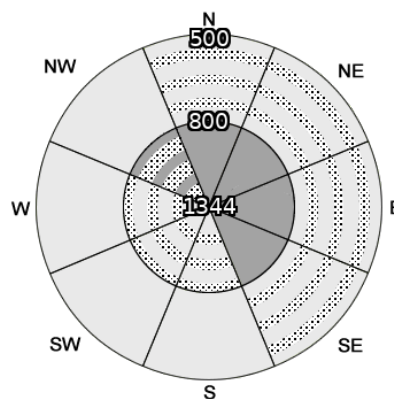

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will increasingly be affected by wet snow instabilities as rain penetrates the snowpack. Greatest accumulations will be on North through East to South-East aspects above 800 metres where avalanches are likely. More localised unstable deposits will be present on other aspects. Cornices will be unstable and prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will be mild throughout the forecast period with the freezing level above the summits and persistent rain at all levels. Winds will be strong mainly South-Westerly.

Comments

A distinctly mild and wet day in prospect on Tuesday, with falling ice and rock being additional hazards.
