

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 15/04/2015

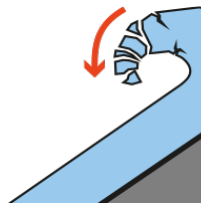

Avalanche Problems

Wind Slab

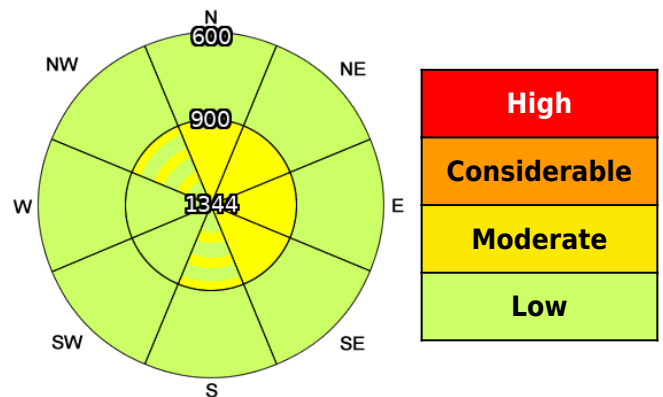

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Wet snow instabilities will initially persist, mainly on steep North through East to South-East aspects above 900 metres. As the freezing level drops the surface of the existing snowpack will start to refreeze and consolidate. Fresh unstable windslab will be deposited in sheltered areas, mainly on North-East to South-East aspects above 900 metres. Accumulations are not expected to be deep or extensive. Cornices will be unstable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Rain will initially fall at all levels overnight, then after midnight the freezing level will drop and precipitation will increasingly turn to snow showers, eventually above 500 metres. Mainly dry during the day. Winds will be moderate to strong Westerly veering West-North-Westerly.
