

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 19/12/2015

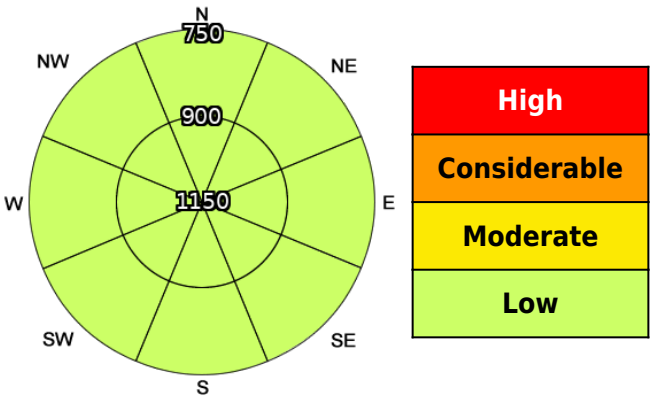

Avalanche Problems

Wet Snow

Forecast Snow Stability & Avalanche Hazard

Any snow that exists will be limited to patches above 900 metres on North to North-East aspects around corrie rims and ridge flanks. The snowpack will be very moist but generally stable. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight heavy rain at all levels, during the day some drier conditions should prevail. Strong winds will be South-South-Westerly and the freezing well above the summits.

Comments

Another mild damp day. Some slightly cooler conditions are forecast for late Saturday as the freezing level lowers to 1500 metres.
