Issued 22/12/2015

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Tue 22/12/2015 TO 18:00HRS Wed 23/12/2015

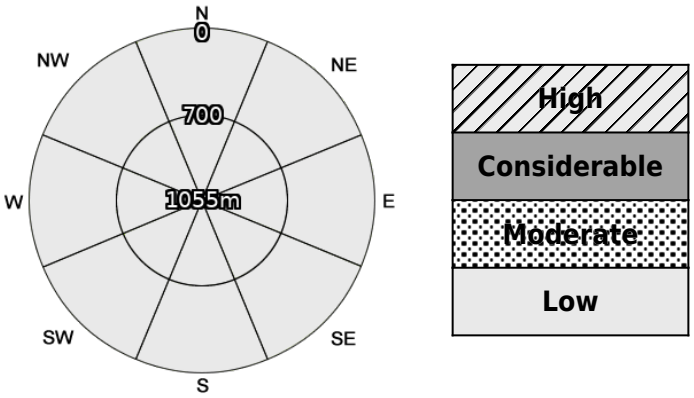
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 23/12/2015

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

As the cooler air arrives snow will fall on the summits above around 700 metres. Very localised areas of wind slab instabilities will develop on North-Easterly aspects especially around corrie rims and gully tops. The avalanche hazard will be Low



Forecast Weather Influences

Very strong South-West winds turning West-South-West then South-South-West later. The freezing level will lower to around 700 metres after the recent warming period. Snow showers are expected at higher altitudes.

Comments

Pleasant walking in the sheltered glens, stormy on the tops.
