

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 27/12/2015 TO 18:00HRS Mon 28/12/2015**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

Winds will gradually increase from the South-East to become strong over the summits by Monday morning. The freezing level will rise above the summits later on Sunday night and remain there for the rest of the period. Some light rain on Monday afternoon

**Forecast Snow Stability and Avalanche Hazard**

As the freezing level rises, localised instabilities will develop in areas where significant quantities of windslab are present. Accumulations will generally be on steep North-West, North and North-East aspects above 1000m. The avalanche hazard will be Considerable

**Observed Avalanche Hazard - Sun 27/12/2015**

**Observed Weather Influences**

Overnight snow showers with the freezing level around 1000m. Winds have gradually increased from the South-West

**Observed Snow Stability and Avalanche Hazard**

Localised areas of fresh windslab are present on many sheltered North-West, North and North-East aspects above 1000m. The avalanche hazard is Considerable

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Good underfoot conditions although more tiring below 1000m.

**Comments**

Good general cover above 600m
