

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 27/12/2015 TO 18:00HRS Mon 28/12/2015

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Winds will gradually increase from the South-East to become strong over the summits by Monday morning. The freezing level will rise above the summits later on Sunday night and remain there for the rest of the period. Some light rain on Monday afternoon

Forecast Snow Stability and Avalanche Hazard

As the freezing level rises, localised instabilities will develop in areas where significant quantities of windslab are present. Accumulations will generally be on steep North-West, North and North-East aspects above 1000m. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Sun 27/12/2015

Observed Weather Influences

Overnight snow showers with the freezing level around 1000m. Winds have gradually increased from the South-West

Observed Snow Stability and Avalanche Hazard

Localised areas of fresh windslab are present on many sheltered North-West, North and North-East aspects above 1000m. The avalanche hazard is Considerable

Mountain Conditions

Observed Mountain Travel Conditions

Good underfoot conditions although more tiring below 1000m.

Comments

Good general cover above 600m
