Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 08/01/2016 TO 18:00HRS Sat 09/01/2016

Hazard Level	Avalanche Probabilty
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate:	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Easterly winds will gradually increase during the day. No precipitation is expected. The freezing level will be around 600m.

Forecast Snow Stability and Avalanche Hazard

Localised areas of unstable snow will be present mainly at the tops of North, North-East and East aspects above 1000m. Other sheltered locations will also be affected. Some redistribution will also take place onto West and North-West aspects later in the day. Elsewhere the snowpack will be generally stable. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Fri 08/01/2016

Observed Weather Influences

A calm, cold and dry day

Observed Snow Stability and Avalanche Hazard

Localised areas of unstable snow are present mainly at the tops of North, North-East and East aspects above 1000m. Elsewhere the snowpack is generally stable. Recent avalanche debris observed on East aspects at 1100m. The avalanche hazard is Considerable.

Mountain Conditions

Observed Mountain	Travel	
Conditions		

Cold and relatively calm conditions on the hill today.
