

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 12/01/2016

Avalanche Problems

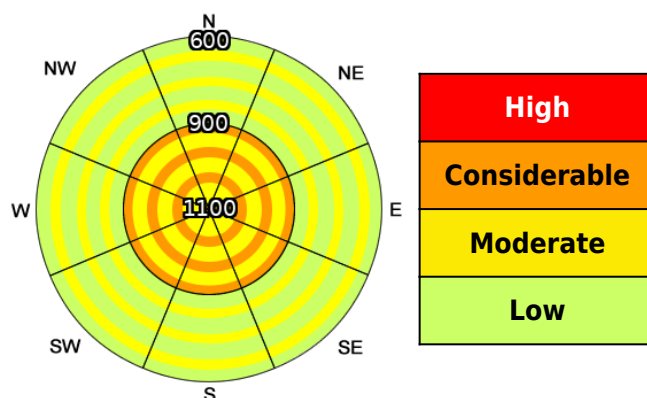

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Due to existing weaknesses, fresh snowfall and the redistribution of existing snow, unstable windslab will be present in sheltered areas on many aspects mainly above 900 metres. The avalanche hazard will be Considerable.

Forecast Weather Influences

Variable winds through the period. Initially light Southerly; increasing moderate North-East overnight, then backing North-West and later Westerly. Light snow showers above 500 metres overnight and early morning. The freezing level will be around 600 metres.

Comments

Complicated weather around an area of low pressure. Low confidence in forecasted snow amounts. Check up to date sources in the morning and adjust mountain travel plans accordingly.
